### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 24-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Rossman et al. (US 4,926,287).

Rossman et al. disclose a apparatus (31) to secure a first electrical connector (not shown, see column 3, lines 30-33) mounted to an electronic module (11) to a second electrical connector (not shown, see column 3, lines 4-6) supported by a support structure (12), such that the first and second electrical connectors mate in an electrically conductive manner, comprising (see Figures 2-5):

a latch (31) pivotally mounted on the electronic module and having a first end (35) and a lever portion (un-numbered), the lever portion configured to exert a force on the electronic module when in a first position to thereby allow the first electrical connector and the second electrical connector to be urged together;

a spring compliant member (38) positioned between the latch first end and the support structure to thereby bias the lever portion away from the first position; and

a catch (23, 24) configured to secure the latch in the first position.

wherein the compliant member applies a sustained mating force on the first and second electrical connectors when the latch is in the first position.

Art Unit: 2833

Wherein a first force (applied by the operator) is required to cause the first and second electrical connector to initially mate, and further wherein the sustained mating force is less than the first force.
